ROTARY SCALPER

THE H&S ROTARY SCALPER removes oversized material from the product stream prior to further processing or storage. The product inlet directs material into the inclined, rotating screen cage. A gentle tumbling action allows product to pass through the screen into the collection hopper. Oversize particles will convey off the end of the screen into the overs discharge.

Sizes available:

RS6A — 6'-0" long x 36" dia. screen cage

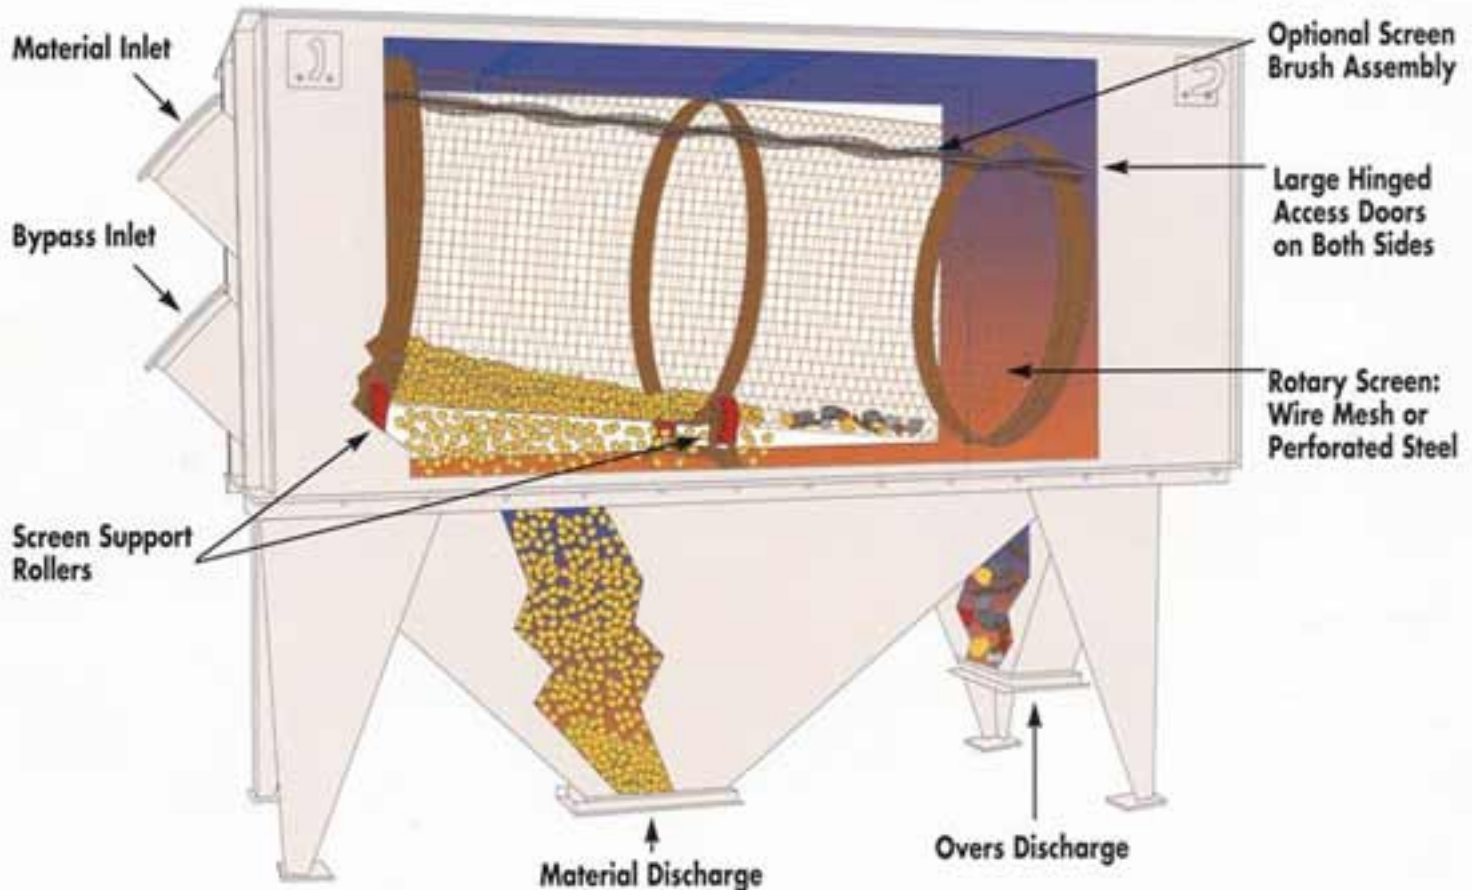

RS7A — 7'-0" long x 42" dia. screen cage

FEATURES

- Dust tight and weather tight design
- Large hinged and gasketed access doors on both sides of unit for screen cage removal and maintenance
